Re: Yellowhead Power Station - Letter of Reference

To Whom It May Concern:

Graham Black and Veatch JV (GBV) awarded Saskarc the supply and delivery scope for the structural steel expansion at the SaskPower Yellowhead Power Station in North Battleford Saskatchewan. This scope was critical to the overall project success, which included the construction and commissioning of a new gas turbine to serve the local population in western Saskatchewan.

Saskarc has completed the following scopes:

- Supply, fabrication, and delivery of ~500 Tons of pipe racks, platforms, monorail beams, stair towers and building steel
- Supply, fabrication, and delivery of handrails, grating, pipe supports, and other miscellaneous scopes
- Coating of steel components for both interior and exterior applications, including galvanizing, and two separate paint systems

Some highlights/challenges of this project include:

- Adapting to in-process design revisions to minimize impacts on the project schedule
- Shop bolting of loose components to facilitate packaging and installation onsite
- Sequencing and grouping of components into fabrication/delivery packages to facilitate construction priorities

Throughout the duration of the project, it was a pleasure to collaborate with the very professional and committed Saskarc Project Team. Saskarc worked closely with GBV to ensure the successful delivery of the project scope, while consistently upholding high standards of quality and safety.

We would recommend Saskarc for any future opportunities involving large scale steel fabrication.

Sincerely yours,

GRAHAM BLACK & VEATCH
