Re: Basin Electric Power Cooperative
Dry Fork Station Unit #1
Contract No. B-512269
Pullman Power LLC Job No. 40548
PO Number 40548-L-04-0739-03-R7

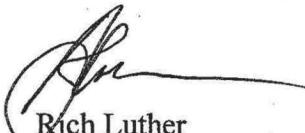

Dear Carl:

In January 2009 Pullman Power LLC issued a purchase order to SaskArc Industries for the fabrication of 317L SS and carbon steel liner sections with corresponding support steel for our chimney project for Basin Electric Power Cooperative at their Dry Fork Station Unit 1 in Gillette, Wyoming. SaskArc was chosen based on competitive pricing and their proven record of quality liner fabrication for several other Pullman Power projects.

Through seven (7) subsequent PO revisions, SaskArc maintained competitive pricing and responded quickly, allowing Pullman to complete the liner installation on time and on budget. SaskArc was instrumental in providing additional fabricated material when supply from other vendors was not possible to meet schedule.

Pullman Power and SaskArc have established and maintained a valuable working relationship through the years and that was evidenced in the successful completion of this project. We look forward to working with SaskArc on future projects.

Very truly yours,

Rich Luther
Project Manager
